Education

Army Institute Of Technology, Pune, BE in Information Technology (Current) 2023 – 2027

- GPA: 9.45/10.0 (Till Sem 5)

Gyanodaya Public School, Sikar, Intermediate level 2022 – 2023

- Percentage: 93.4

Projects

Prepped — AI-Powered Technical Interview Platform | Django, Next.js

- Built a full-stack platform using Django and Next.js for software engineers to practice Data Structures and Algorithms.
- Integrated Langchain and Gemini AI to conduct interactive mock interviews, providing real-time feedback and dynamic follow-up questions based on user code submissions.
- Implemented a LeetCode-style coding environment using Monaco Editor, complete with performance tracking and detailed AI-generated interview summaries.

CodeQuest — Gamified Technical Learning Platform | Next.js, Supabase, Tailwind CSS

- Built a full-stack learning platform using Next.js and Supabase designed to help experienced software engineers master new programming languages by mapping concepts to their existing knowledge base.
- Developed a highly interactive, Game-inspired learning environment utilizing Framer Motion and Tailwind CSS, featuring a dynamic "kingdom map" to visualize module progression.
- Implemented a robust progression system with Zustand for state management, incorporating daily streaks, XP tracking, skill-based achievements, and real-time cross-device synchronization.

Technical Skills

Programming Languages: CPP, SQL, Python

Web Development & Frameworks: React, NextJS, Django, Supabase

Tools & Technologies: Git, Figma, DaVinci Resolve

Core Computer Science: DBMS, Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), Operating Systems (OS)

Hackathons Experience

AlgoFusion 2026 – 2nd Place | AIT Pune

- Developed an AI-powered voice assistant for clinics that transcribes consultations, maintains patient records (prescriptions, allergies, visit history), and generates structured summaries to improve clinical documentation and patient follow-up.

NLD Synapse 2026 – Top 20 Team (220+ Registrations) | N. L. Dalmia Institute of Management Studies and Research

- Developed a data-driven solution for an EV fleet management case study using regression models, Python data analysis and visualization (Matplotlib), Power BI, and Tableau to generate predictive insights and support decision-making.
